

FUTURE-PROOF YOUR FURNITURE

THE RISING COST OF OFFICE SPACE IS HAVING A HUGE IMPACT ON AN ORGANISATION'S NEED TO MAKE THEIR PREMISES MORE COST EFFECTIVE. WE TAKE A LOOK AT ONE PRODUCT DESIGNED TO HELP BUSINESSES REDUCE OFFICE SPACE COSTS.

Furniture is often the last investment when refurbishing or moving premises. In many companies, once the reception, boardroom and Director's office are budgeted for, the back offices are regarded as secondary. But things are changing - businesses are now realising the benefits that flexible furniture can bring.

The rising cost of space is having a huge impact on an organisation's need to make their premises more cost effective. This results in most businesses significantly increasing capacity within their existing buildings, reducing desk top sizes and introducing furniture that can change with the company's changing needs.

The average UK office replaces its furniture every eleven years. Looking back to 1996, even the most sophisticated of those office environments would have difficulty in meeting current legislation, far less achieving the productivity required to remain competitive in today's market. With future changes certain to affect office working, the focus is on ensuring that the products we purchase today can be used in our companies' tomorrow.

The Framework range of desking is built on an adjustable desk frame which can be increased or decreased in size to suit changing environments. Also with only four key components needed to build any size or shape of desk, the possible configurations are limitless and allow users to continue to use the same four components over and over to create new shapes and sizes.

The simplicity of the range and its components mean that the desks can be taken apart and reconfigured in less than ten minutes each, making office moves, changes and even planned maintenance far quicker and easier.

Small to medium sized businesses through to world leading bluechip organisations such as Asda-Walmart, Regus and BAE are

all using the Framework desking system to give them flexibility and control over their office moves and changes.

With a ten year guarantee, you can purchase Framework from **acs**, safe in the knowledge that it will grow and adapt with your business's needs.

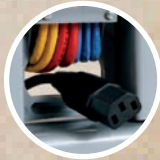

For more information about how Framework could benefit your business and a free demonstration at our showrooms, call **acs** today on **01604 704000**.

TOP 5 FEATURES TO LOOK FOR IN A FUTURE-PROOFED DESK

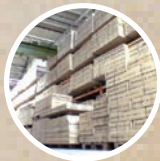

1. QUALITY

Protect your furniture investment for years to come by choosing a desk tested to the highest standards. Every product in the Framework range is rigorously tested and certified for strength, stability and workmanship by FIRA.

2. IT INTEGRATION

Ensure the desks you choose are designed with IT in mind - from deep cable trays with easy access, to wide apertures and ability to accommodate the latest technologies. Framework is the only CAT6 compliant desk in the UK.

3. FAST SUPPLY

Business needs change quickly, and so should your furniture. Choose a supplier who holds stock in the UK and can fulfil orders as and when you need them. Over 20,000 Framework desks are ready and waiting for your order.

4. FLEXIBILITY

Never underestimate the need to reconfigure your desking as your business changes. With Framework desking, you can change the size and shape of any desk to fit your needs - for a fraction of the cost of replacing with new.

5. BUILD AND REBUILD

Business is always on the move. Framework desks can be dismantled and rebuilt with just one tool, and have metal on metal fittings, so they remain strong and stable - no matter how many times you move or dismantle them.

Framework, FT2 and FastTrack desks are used by many small to medium sized organisations, as well as the following world leading companies;
