

# DOUBLE-TAKE® SOFTWARE SOLUTIONS FOR ORACLE®

## Double-Take® Software is a member of the Oracle Partner Network.

Double-Take, from Double-Take Software, provides data replication and failover to ensure customers have the highest level of data protection and availability for business-critical Oracle applications.

If you are relying solely on tape backup or, even worse, don't have a sound data protection strategy for your Oracle databases and applications then you should be sure to check out Double-Take Software. Nightly backups to tape protect yesterday's work and clustering solutions can sometimes be too complex or cost prohibitive. With Double-Take, features such as efficient byte-level replication, built-in bandwidth control, and compression, data can be replicated and restored over long distances without service degradation. What's more, the automated failover capabilities can quickly resume Oracle services on a standby server at another location without requiring any changes to existing databases or applications.

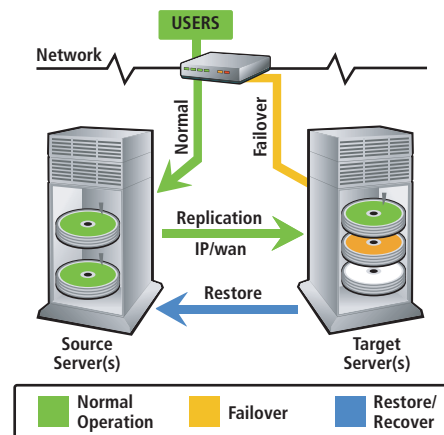

Oracle databases power your company's business-critical applications; protecting them and the data they serve is critical to recovering from a disaster of even the smallest proportions. Double-Take protects Oracle data and applications by leveraging continuous data replication and application failover, allowing recovery from an outage or disaster in minutes with minimal data loss. It also delivers better protection than many hardware-based solutions, and it costs tens of thousands less.

## Double-Take Replication Technology

- **Disaster Recovery Protection** against server, site, & regional failures. Meets stringent corporate and regulatory requirements – HIPAA, SOX
- **Unlimited replication distance.** Double-Take works over any distance using your existing IP networks
- **Continuous, asynchronous, byte-level replication.** Double-Take monitors changes to all protected files and replicates only the bytes that change
- **Windows Logo Certified** for Windows Server 2000 /2003 (all editions)

### How Double-Take Works

## Double-Take Oracle Protection Solutions

- Real-time Oracle data protection – Up-to-the-moment data recovery
- Byte-level replication – Quick and efficient replication of Oracle changes
- Intelligent data compression – Reduced network utilization – Highest performance levels
- Scheduled network utilization limits – Control bandwidth usage for stealth operation
- Immediate failover protection – Maintain productivity during adverse situations
- Simplified management via intuitive GUI – Automatic redirection without any client profile changes
- Email notifications – Automatic awareness of potential issues
